

**■ Warm water heater battery
for rectangular duct connection.**

Casing made of galvanised steel with flanges on both sides to fit the HELIOS rectangular fan range. Heating elements made of copper with aluminium fins.

Max. operating temp.: t_{\max} , 120 °C.
Max. operating pressure: 8 bar.

Water pipes with male thread.

Equipped with water and air outlets.

■ Installation

The heater must be installed downstream of the fan. If installing it before the fan, make sure that the air flow temperature at the fan does not exceed the fan's max. temperature.

To protect the heater from dirt and to prevent it from being clogged (reducing air flow and heat output) we recommend the use of the air filter KLF..

A rectangular duct with a length of at least 1 metre must be installed between fan and heater in order to ensure a balanced air flow. An air bleed valve and a water drain valve must be provided for releasing air and water from the unit.

Note: In order to avoid water freezing in the pipes, frost protection shall be provided onsite.

■ Selection

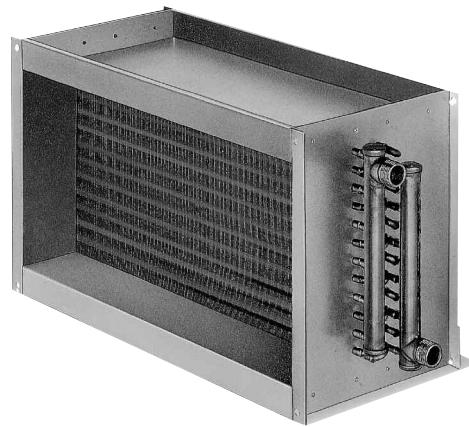

The actual temperature increase depends on the air flow volume, heater output and inlet water temperature.

Follow steps ① – ③ to determine the required heater.

When selecting a fan (air flow volume decision) the resistance of the heater (pressure drop) must be (chart ④) considered.

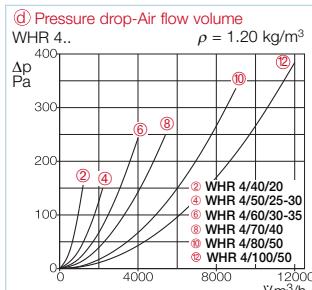

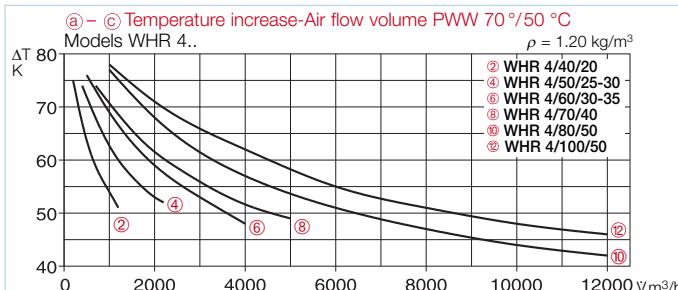

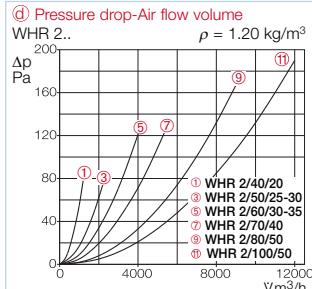

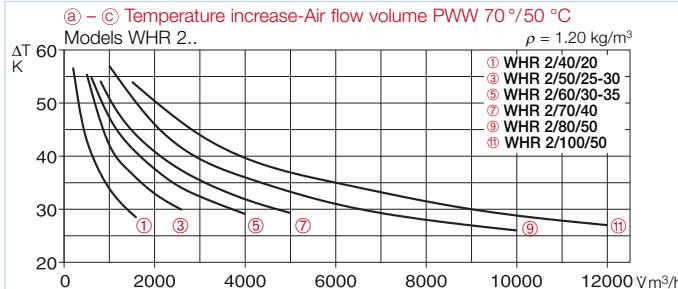

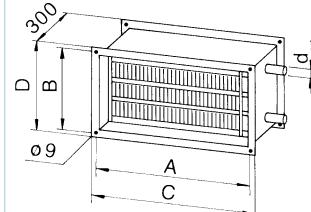

① Temperature increase

Definition: $\Delta T = \vartheta_j - \vartheta_a$ [K]
 ΔT : Temperature difference of air [K]
 ϑ_j : Air temp., off air heater [°C]
 ϑ_a : Air temp., on air heater [°C]

WHR Duct

Accessories	Page
Temperature controller WHS	316

Dimensions in mm see chart

② Air flow volume

Shown on the performance curve whereby the total resistance of the system and heater (see chart ④) (pressure drop) must be taken into account.

③ Determination of required air

$$Q_H = \frac{V \cdot \Delta T \cdot c_{PL} \cdot \rho_L}{3600} [\text{kW}]$$

V: Air flow volume [m³/h]
 ΔT : Temperature difference of air [K]
 c_{PL} : Specific heat capacity of air (1.0) [kJ/kg K]
 ρ_L : Air density (1.2) [kg/m³]

④ Determination of pressure drop

The pressure drop of the heaters at air flow volumes is illustrated in the above charts.

Type	Ref. No.	Fits fan nominal size	Air Data				Water data ¹⁾ at water flow rate	Dimensions	Connection d ³⁾	Nominal weight	Suitable temperature controller Type	Ref. No.	
			heat output		ΔT air								
		NG cm	kW ¹⁾	kW ²⁾	K ¹⁾	K ²⁾	m³/h	Δp_w kPa	l/h	mm	mm	mm	mm

The values apply for an intake air temp. of 0 °C and flow/return water temp: 1) 90/70 °C, 2) 60/40 °C

3) 3/4" = 19.05 mm, 1" = 25.4 mm, male thread

4) under reduced heat output at ca. 2200 l/h
