## Section 1 | The market leading ventilation brand

As a leading designer and manufacturer of energy saving ventilation systems, our exclusive Domus duct products and mechanical extract appliances offer a high quality solution for domestic applications.

- Easy to install products that save time and money on site
- High quality trusted brand
- Superior support services with nationwide stockists

Suitable for all residential applications

Apartments

Homes

Hotels

Student Accommodation

Care Homes

### How to use this catalogue:

- 1** Choose a suitable ventilation system

**System 1 - Intermittent**

**System 3 - dMEV**

**System 3 - MEV**

**System 4 - MVHR**

- 2** Select a unit from that system

System 1

System 3

System 3

System 4

- 3** Following that, select a suitable ducting system, either rigid or semi-rigid radial duct

Dedicated to providing efficient, quick and reliable delivery.

#### Customer Services

We believe at Domus Ventilation we have some of the best people within the industry working together to support all our customers. We pride ourselves on the excellent quality of service our team provides and operate in a culture of continual improvement.

#### Stockists

At Domus Ventilation we have two significant manufacturing facilities, that help guarantee quick availability through a loyal nationwide network of Merchant and Electrical Wholesaler stockists. To find your nearest stockists or if you are interested in becoming one, please call 03443 715523.

#### Technical Support

Understanding your ventilation requirements is integral to ensuring that we tailor our solutions to meet your needs. Our experienced team is therefore available to help you with your project or sales enquiry and provide services ranging from:

- FREE bespoke technical drawing
- Speedy quotations
- Installer training accredited by BPEC
- Access to a FREE of charge BIM library

#### Delivery

To promptly service our national network of stockists, we offer a dedicated and managed logistics fleet, who are dedicated to providing efficient, quick and reliable delivery.

Section 2 Mechanical Ventilation with Heat Recovery (MVHR)

Helps to create a healthy and clean indoor air environment whilst reducing household energy consumption.

Inadequate ventilation coupled with airborne pollutants can lead to poor indoor air quality and as a consequence may have a detrimental effect on an occupant's health and comfort.

Incorporating a highly efficient Mechanical Ventilation with Heat Recovery (MVHR) system is an effective way of avoiding this and helps to maintain a healthy living indoor environment.

How it works

Also referred to as System 4 in Approved Document F of the Building Regulations, MVHR efficiently combines supply and extract ventilation into one centralised system. As its primary function, waste, polluted and moist air is extracted from a dwelling's wet rooms via a duct system and is passed through a heat exchanger before being exhausted outside. Fresh incoming air is filtered and as an added benefit, pre-warmed via the heat exchanger and evenly distributed to the habitable rooms, thus reducing household energy consumption and the demand on existing heating systems. The technology is most effective when installed in an air-tight dwelling as the effect is not compromised by external leakage.

SAP ratings

As a benefit to developers, specifiers and house builders alike, the incorporation of a highly efficient heat exchanger will also help lower Dwelling Emission Rates (DER) and therefore provide higher SAP ratings.

Benefits of Domus MVHR Systems

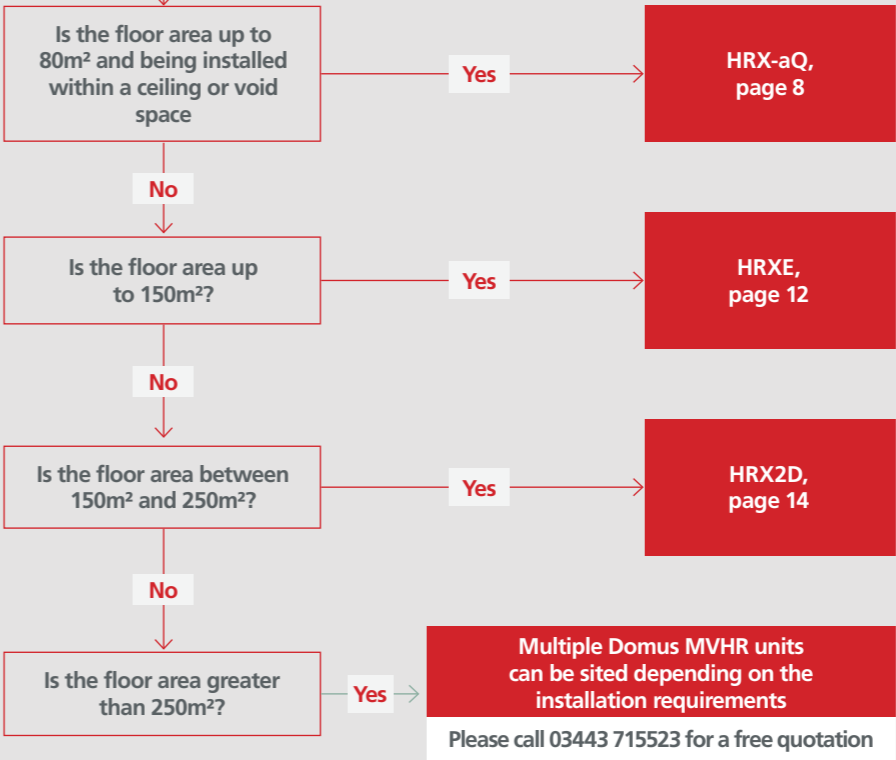

- Improves indoor air quality through continuous balanced ventilation, throughout the whole house
- Easy and quick to install, commission and maintain
- Helps reduce the Dwelling Emission Rate (DER) to secure additional SAP points
- Provides peace of mind that the units performance levels comply with current Building Regulation requirements
- Reduces household energy consumption

When installed with Domus duct systems, the HRX range provides the ultimate energy saving ventilation system.

MVHR Unit Selector

Balanced ventilation for a whole house

# HRX-aQ

Fits into ceiling voids and utility cupboard spaces

**INSTALLATION**

 **Supports kitchen and up to two wet rooms**  
Floor area 80m<sup>2</sup>

IS A WHOLE HOUSE SYSTEM

Building Regulations Compliant 

ErP Directive Compliant 

**A+** 

**Incorporates an advanced Bluebrain control**

Ultimate, flexible and intelligent control

Straight forward, accurate commissioning

SEE PAGE 16

The most compact and intelligent void mounted MVHR ceiling unit in the market, the HRX-aQ enables contractors to deliver quicker installation with minimum hassle.

- Specific Fan Power (SFP) down to 0.72 (W/l/s)
- Bluebrain control optimises the unit's functionality and allows for quick and easy commissioning through simple speed adjustment buttons
- High heat exchange efficiency up to 87%
- Extremely quiet in operation, down to 24dB(A)
- Compact and lightweight – weighs 7.9kg and measures 199mm in depth
- Effectively extract up to 30l/s at boost (for a kitchen and two wet rooms)

For technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

204x60mm socket connections enable the unit to directly fit onto rigid ducting and remove the need for additional adapters. For information on Domus rigid ducting, go to page 48. For Radial semi-rigid ducting, go to page 84.

Code	Description	Unit Depth	Thermal (Summer) Bypass
AQH200-S	Void Mounted MVHR unit	199mm	
AQH200-B	Void Mounted MVHR unit bypass	199mm	

Code	Accessories
297	Condensate Drain (not included)
AQHC-CC8	8 metre data cable (not included)
SPR442	Replacement filters for AQH200-B & AQH200-S units (pair)

AQH200-B

HRXE  
and Opposite Handed versions

INSTALLATION

IS A WHOLE HOUSE SYSTEM

Supports kitchen and up to five wet rooms  
Floor area 150m²

Building Regulations Compliant

ErP Directive Compliant

The heat exchanger block within these units can recover up to 90% of the normally wasted heat. The two independent fans have full-speed control for background and boost ventilation rates.

All models have a 100% automatic bypass function, utilised in warmer months. By entering in to Bypass mode the HRXE unit no longer recovers heat from extracted air and simply allows cooler air from outside to pass through its G3 filters and enter the home via the supply valves.

Due to its intelligent and smart design, there will be no reduction in airflow when operating in bypass mode resulting in enhanced performance.

All HRXE models have been designed with 100% automatic bypass, as listed on the SAP Product Characteristics Database (PCDB).

The HRXE range operate by continuously extracting moisture-laden air from 'wet' rooms within the property and at the same time drawing in fresh supply air from outside. The heat from the extracted stale air is recovered via a heat exchanger inside the heat recovery unit which becomes tempered and filtered, before supplied in to the habitable rooms, creating comfortable and well ventilated homes.

Dimensions (mm)

Performance

Code	Description	Unit Depth	Thermal (Summer) Bypass
HRXE	Standard unit with 100% bypass	356mm	✓
HRXE-H	Standard unit with 100% bypass and integral humidistat	356mm	✓
HRXE-OP	Opposite handed unit with 100% bypass	356mm	✓
HRXE-OPH	Opposite handed unit with 100% bypass and integral humidistat	356mm	✓

Code	Accessories
397	Condensate drain suitable for HRXE units only
SPR428	Replacement filters suitable for all HRXE units (pair)
HRX-CKK1	Duct Connect Kit
HRXE-AV	Anti-Vibration tray suitable for all HRXE models

# HRX2D

**Mounts onto a wall in either a kitchen or utility cupboard space**

## INSTALLATION

IS A WHOLE  
HOUSE SYSTEM

**Supports kitchen and up to seven wet rooms**  
**Floor area 250m<sup>2</sup>**

Building Regulations Compliant

ErP Directive Compliant

**A+**

**A**

**Incorporates an advanced  
Bluebrain control**

Ultimate, flexible and intelligent control

Straight forward,  
accurate commissioning

**SEE PAGE 16**

**Ideal for larger developments, the HRX2D is a highly efficient and intelligent MVHR unit, which is quick and easy to install and operate.**

- Extremely low Specific Fan Power (SFP) down to 0.57 (W/l/s)
- Bluebrain control optimises the unit's functionality and allows for quick and easy commissioning through simple speed adjustment buttons
- High heat exchange efficiency up to 94%
- Very quiet in operation, down to 35dB(A)
- 20kg

### Dimensions (mm)

## System illustration

HRX2-CK1	Hose Connection Kit (not included)
AQHC-CC8	8 Metre Data Cable (not included)

**Install with a  
Domus Ventilation  
297 Condensate  
Drain**

# Bluebrain Control

Optimises Domus MVHR systems, as well as making commissioning simpler

FUNCTIONS

- Control functions
- + Increase value/speed (+)
  - Decrease value/speed (-)
  - 1 Set temperature activation point
  - 2 Set date and time
  - 3 Set humidity trigger point
  - 4 Adjust thermal (summer) bypass
  - 5 Copy program
  - 6 Select and edit program
  - 7 Escape function
  - 8 Save function

Through advanced AMIE technology (Air Management for Indoor Environments), the Bluebrain controller not only offers simple pre-programmed functions, such as night time cooling and intelligent thermal bypass, it also allows for straightforward commissioning.

Intelligently manages air conditions

Digital humidity control aiding homeowner comfort

Through advanced AMIE technology, unlike typical humidity sensors, the Bluebrain MVHR controller will enable occupants to have direct control over managing the humidity levels in their home – to suit personal comfort levels. By accurately measuring air humidity, the MVHR’s extract speed automatically changes from background to boost as the level of humidity increases, thereby providing optimal ventilation performance.

Advanced thermal bypass control

Perfect for night time cooling or during warmer periods, the MVHR controller detects when the air temperature reaches a pre-set level and intelligently activates the thermal bypass mechanism to maximise the effect of maintaining fresh and filtered air. The thermal bypass is also programmable by time, for additional convenience and comfort.

For technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

Commissioning made easier

Simple speed control

Engineered to include independent speed control, the Bluebrain control allows quick and accurate commissioning through simple speed adjustment buttons.

The Bluebrain controller takes the hassle out of MVHR commissioning.

CM01  
Commissioning  
Anemometer

Dirty filter indicator

Automated filter maintenance and replacement reminders

Ease of maintenance and filter replacement is an important consideration when choosing MVHR – not only to ensure performance of the unit is maximised and air quality maintained, but also for peace of mind. The MVHR Bluebrain control removes this concern by providing helpful maintenance reminders for cleaning its filters.

Control features summary

- Includes advanced AMIE technology (Air Management for Indoor Environments)
- Power indicator
- Status indicator (frost protection, thermal bypass, etc.)
- Fault indicator with diagnostics
- Independent fan speed control
- Switched live inputs (signal triggers):
  - Mains level x 2
  - Volt free to boost x 2
  - Volt free to max x 1
- 3 variable speeds
- Clean filter indicator
- Frost protection
- Built in humidistat
- Run on boost timer
- Delay ‘on’ boost
- Pre commissioning filter protection
- Discreet run monitor
- Lockable commissioning mode
- Time and date display
- Real time air temperature display
- Real time extract air humidity level display
- Easy to read, contemporary digital display

The Bluebrain controller is compatible with the following MVHR units:

HRX-aQ

See page 8

Fits into ceiling voids and utility cupboard spaces.

HRX2D

See page 14

Mounts onto a wall in either a kitchen or utility cupboard space, or in a loft.

# NOX-FILT

Mounts on to a wall or within void space

**INSTALLATION**

The NOX-FILT carbon filter is designed to be situated on the supply leg of a mechanical ventilation system, negating the need for thermal insulation, and preventing up to 99.5% of airborne contaminants entering the property. Whilst the immediate emphasis is on the filtration of harmful NO<sub>2</sub>, often found in high levels within cities across the UK, there is also the option of a PM2.5 pre-filter to maximise the filtration of Particulate Matter equal or larger in size to 2.5 micron.

**A single carbon filter cartridge, plus optional PM2.5 pre-filter, prevent air polluted with toxic gases and allergens from entering the property via a Mechanical Ventilation System.**

- Up to 99.5% NO<sub>2</sub> filtration
- Simple to replace, single carbon filter cartridge
- Low resistance meaning ventilation systems are not affected
- Optional PM2.5 pre-filter for increased Particulate Matter filtration
- Low profile for space restrictions
- Tested in accordance with BS EN ISO 7235:2009

For technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

**Dimensions (mm)**

## Performance

**KEY**

- 1 **NOX-FILT2.5**  
Carbon filter with PM2.5 pre-filter included
- 2 **NOX-FILT**  
Carbon filter only

To specify the NOX-FILT with or without a PM2.5 pre-filter, choose the relevant code from the following table:

Code	Description
NOX-FILT	Inline carbon filter
NOX-FILT2.5	Inline carbon filter with additional PM2.5 pre-filter

Code	Accessories
NOX-PM2.5	Replacement PM2.5 filter
NOX-CF	Replacement carbon filter cell

Section 3 MEV Introduction

A continuous, effective and efficient means of maintaining the indoor air quality that you breathe and live in.

It can be common in modern, air-tight properties for a buildup of condensation, mold and stale air can negatively impact the health of occupants and the fabric of the home. Installing an energy efficient Mechanical Extract Ventilation (MEV) system will effectively help to remove these pollutants and maintain a healthy indoor air quality.

How it works

Also referred to as System 3 in Approved Document F of the Building Regulations, an MEV system consists of a centralised ventilation unit that continuously extracts waste, polluted and moist air from wet rooms and can be discreetly positioned in either a cupboard, utility room, ceiling or loft space.

An MEV system can be ducted throughout the dwelling and operated by the homeowner through a range of control options. Typically dual speed, MEV systems provide both low speed continuous trickle ventilation and high speed boost flow when required. Replacement fresh air is drawn into the dwelling through background ventilators i.e. air inlets, located in the living areas.

SAP ratings

As an added benefit to developers, specifiers and self-builders, incorporating an MEV system will also help to lower Dwelling Emission Rates (DER) and therefore provide higher SAP ratings.

For those looking to further improve their DER and integrate heat recovery into a centralised extract system, please see page 6.

Benefits of Domus MEV systems

- Improves indoor air quality through continuous ventilation
- Delivers quicker installation with minimum hassle
- Helps reduce the Dwelling Emission Rate (DER) to secure additional SAP points
- Provides peace of mind that the unit's performance complies with Building Regulations
- Fits easily into joist spaces

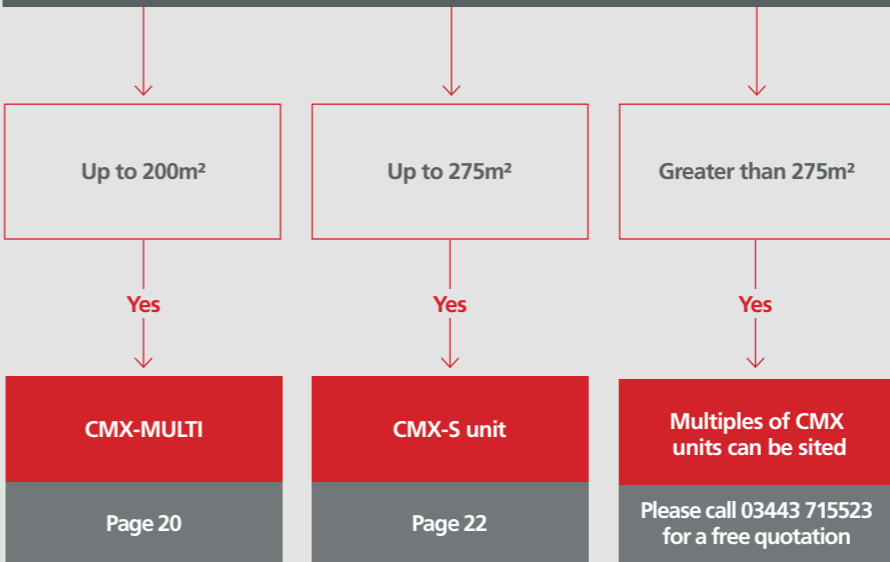

One of the most versatile and easiest to install MEV solutions. Engineered for optimum system performance and to provide discreet operation.

Helps to provide healthy and clean indoor air.

MEV Unit Selector

What is the dwelling total floor area?

Domus CMX air supply kits provide effective background ventilation.

CMX-ASK1W (white)  
CMX-ASK1B (brown)

CMX-MULTI

Fits into ceiling voids and utility cupboard spaces – horizontally or vertically

INSTALLATION

IS A WHOLE HOUSE SYSTEM

Supports kitchen and up to 6 wet rooms

Building Regulations Compliant

ErP Directive Compliant

**Installation**

Flexible installation. Can be fitted horizontally or vertically:

- Inside a kitchen cupboard or utility room
- Direct to a ceiling or in a loft space
- Within a joist space

Aimed at the Residential market its shape and size conform with New Build restrictions, whilst also making it ideal for retro-fit projects due to direct duct runs and wall or ceiling void fixings. Quiet running, whilst comfortably providing impressive airflow rates and with a choice of models with and without integral humidistat, the CMX-MULTI range provide the solution in Mechanical Extract Ventilation.

- The best SFP on the market, down to 0.14(W/I/s)
- CMX-MULTI-H has integral humidistat, ideal for specification works
- 204x60mm spigots allowing direct duct runs from the unit, saving time and money on site
- Exceptionally compact (125mm deep) and lightweight (3.1kg), ideal for small ceiling void depths

Dimensions (mm)

Performance

Code	Description	Unit Depth
CMX-MULTI	CMX-MULTI Mechanical Extract Ventilation Unit	125mm
CMX-MULTI-H	CMX-MULTI Mechanical Extract Ventilation Unit with Integral Humidistat	125mm

For compatible accessories please refer to table on page 23.

B

Domus CMX air supply kits provide effective background ventilation

See accessories table on page opposite.

At just 125mm in depth, the CMX-S is one of the most versatile, easy to install and energy-efficient MEV solutions available on the market.

- Low Specific Fan Power (SFP) down to 0.24 (W/l/s)
- Exceptionally compact (125mm deep) and lightweight (3.25kg), ideal for small ceiling void depths
- Very quiet in operation, down to 34dB(A)
- Distinct EPP casing reduces noise
- High air flow performance up to 120 l/s
- In-line ports enable straightforward duct connection
- Flexible home owner control (3 speed options)

Ideal for Light Commercial application due to it's impressive 120l/s duty.

For technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

Section 4 Decentralised Mechanical Extract Ventilation (dMEV)

Our highly efficient Domus dMEV range offers continuous low level ventilation – to a single wet room, coupled with virtually silent operation.

How it works

Also known as System 3 in Approved Document F of the Building Regulations, decentralised Mechanical Extract Ventilation (dMEV) systems incorporate continuously running extract fans, designed to remove waste and moist air from a single wet room. dMEV fans continuously extract the waste air at both low trickle or boost speeds, as determined by the homeowner through a range of control options. Replacement fresh air is then drawn into the dwelling via background ventilators located in the habitable rooms.

SAP ratings

As an added benefit to developers, specifiers and self-builders, incorporating a dMEV system will also help to lower a property's Dwelling Emission Rate (DER) and therefore provide a higher SAP rating.

Sapphire Range

Stylishly designed to discreetly complement modern interior design schemes, our dMEV Sapphire range offers exceptionally high levels of energy efficient performance and operates almost silently; ensuring homeowners are not disturbed whilst maintaining continuous and effective balanced ventilation.

100mm (4") Energy Efficient Mounts onto a wall or ceiling

SUITABLE FOR

COMPLIES WITH

- Provides very quiet levels of continuous ventilation to a single wet room
- Stylish fascia to fit interior design scheme
- Very low SFP down to 0.30 (W/l/s)
- Ideal for long duct runs, with up to 6m in duct

For technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

Section 5 Intermittent Extract Fans

Our range of Domus bathroom and kitchen fans provide rapid local extraction and include axial, in-line and centrifugal options. With a number of years presence in the UK market, our Domus range has earned itself a superb reputation for quality, reliability and ease of installation.

How a fan works

Also known as System 1 in Approved Document F of the Building Regulations, intermittent extract is a classic method of ventilating a home, either under occupant or automatic control i.e. a timer or a pull cord.

For style and quiet performance, choose from our Sapphire range

- Ultra quiet ventilation
- Stylish design
- Complies with Building Regulations and the ErP Directive
- Optional fascias for STF/GTF 100mm fans

UK manufactured

Electrical safety zones

Where is it safe to install a fan?

Fans are commonly 240 Volts, however to protect occupants who need a fan installing close to a shower or bath, there are Separated Extra Low Voltage (SELV), 12 Volt, fans available.

Please use our illustration to help you know where you should and SHOULDN'T install a fan, as well as knowing where you need a 240 or 12 Volt fan.

For more information, see section 701 of British Standard 7671:2008.

If in doubt, contact a qualified electrician for installation.

- Zone 0**  
No fans permitted.
- Outside Zone**  
Fans positioned in this area will be less effective.
- Zone 1**  
12 Volt (SELV) fans.  
Must be positioned above Zone 0 over 2.25m from the floor.
- Zone 2**  
240 Volt fans.  
Must be positioned horizontally 0.6m from Zone 1.

How to choose the right fan

1 Step one

What sort of property are you installing into:

A new build property?

REPLACEMENT FANS

An existing property?

REPLACEMENT FANS

2 Step two

What wet room are you installing into:

BATHROOM

TOILET

KITCHEN

UTILITY ROOM

3 Step three

What sort of fan and model do you want:

Axial models - pages 28-36

Connect to a short duct run, up to 1.5m in length, typically running through a wall to an external grille.

Typical axial installation

In-Line models - pages 37-39

Perfect for shower applications and commonly mounted in a loft or ceiling void.

Typical in-line installation

Centrifugal models - pages 41-45

Suitable for longer duct runs up to 6m in length and can be wall or ceiling mounted.

Typical centrifugal installation

4 Step four

What voltage your fan should be: 240V or 12V (SELV).

For more information on whether you need a 240V or a 12V (SELV) fan, see page 26 (left).

5 Step five

What extra options do you need:

Timer

Pull Cord

Humidistat

PIR

LED

Retail Pack

Duct Kit

Twin Speed

Back draught shutter

# 100mm (4") Energy Efficient Mounts onto a wall

# CONTACT DOMUS VENTILATION FOR A FREE OF CHARGE MVHR AND MEV TECHNICAL DRAWING SERVICE!

Domus Ventilation have a dedicated, in-house Technical team offering a range of services from duct take-off's and estimations, to Revit MVHR and MEV drawings. You will be met with ongoing support throughout your project, from initial enquiry through to a detailed delivery plan which suits you.

And the best part is, these services are completely **free of charge!**

## Send us your project details and receive:

- ▶ An assigned Estimator/Designer who will become your direct point of contact
- ▶ **FREE OF CHARGE** drawings available in AutoCAD or Revit
- ▶ A full Bill of Materials
- ▶ Scheduled, nation-wide delivery
- ▶ Ongoing technical support when our kit is on site

### Mechanical Extract Ventilation, CMX-MULTI unit

### Mechanical Ventilation with Heat Recovery, HRXE unit

## Domus Ventilation also offer BPEC approved facilities for installer training.

Enquire now for course dates at our 3 Professional Development Centres!

## Contact us:

Tel 03443 715 523 | [vent.projects@domusventilation.co.uk](mailto:vent.projects@domusventilation.co.uk) | [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

## Controls Options

The Domus Ventilation range of control options are ideal for mechanical extract appliances designed for remote switch operation.

All products can be flush or surface mounted using a standard single pattress box.

### Humidistat with Overrun Timer Switch

More sensitive than traditional humidistat controls, Intelligent Humidity Control (IHC) identifies a significant change in humidity. Timer adjustable between 2-25 minutes.  
**W89mm x H89mm x D54mm\* 5 amps**

#### Code

ANC802A

### Humidistat with Pull Cord and Timer Switch

More sensitive than traditional humidistat controls, Intelligent Humidity Control (IHC) identifies a significant change in humidity. Neon indicator and pull cord override.  
**W89mm x H89mm x D54mm\* 5 amps**

#### Code

ANC808A

### Duct Mounted Humidistat with Remote Sensor and Overrun Timer

More sensitive than traditional humidistat controls, Intelligent Humidity Control (IHC) identifies a significant change in humidity. Timer adjustable between 2-25 minutes.  
**W89mm x H89mm x D54mm\* 5 amps**

#### Code

ANC846A

### PIR Switch with Overrun Timer Switch

Activates by detecting movement. Detection distance of up to 5 metres. Timer adjustable between 2-25 minutes.  
**W89mm x H89mm x D54mm\* 5 amps**

#### Code

ANC813A

### Overrun Timer Switch

Adjustable time delay between 2-25 minutes after the light switch has been turned off.  
**W89mm x H89mm x D54mm\* 5 amps**

#### Code

ANC108A

### Two Speed Rocker Switch

Provides two speed operation for twin speed fans.  
**W89mm x H89mm x D54mm\* 5 amps**

#### Code

ANC812A

\*Includes 35mm surface mounted pattress box (supplied).

Section 6 | Duct Systems

Our Domus range offers the most comprehensive selection of high quality plastic ducting available in the industry. The range includes six profile sizes of rigid ducting to allow customers to select the most suitable system based on the dwelling type and installation requirements.

Rigid Duct Overview

As a branch based system, rigid duct is ideal for new build or for where space isn't restricted and can be used with MVHR, MEV, dMEV or intermittent extract. Our market leading Domus rigid duct range is available in 6 different profiles to suit any application and comes with a full set of adapters to enable a simple or complex system as required.

Designed to offer high levels of air tightness and system efficiency, Domus rigid duct systems are also supported by patented duct insulation, fire stopping & sound attenuation components as shown in more detail on pages 78-83.

Unique to the range are our high efficiency duct bends, designed to reduce duct resistance and overall system energy usage, in addition to innovative flow control plenums, engineered to allow connection to a range of stylish architectural grilles. Read more on page 80.

Rigid Duct Profile Selector

Appliance duct connection size

When a profile has been specified and the duct layout designed, the system resistance must be calculated to ensure that the appliance has sufficient power to more than match the resistance of the complete system.

Suitable Application

	Size	Range	Free Area	Application
<b>Rectangular</b>				
	110x54mm	System 100	5,300mm <sup>2</sup>	Bathroom, toilet, utility room
	204x60mm	Supertube	11,200mm <sup>2</sup>	Bathroom, toilet, utility room, kitchen and whole house
	220x90mm	Megaduct	17,968mm <sup>2</sup>	Kitchen, commercial and whole house
<b>Round</b>				
	Ø100mm	EasiPipe 100	7,850mm <sup>2</sup>	Bathroom, toilet and utility room
	Ø125mm	EasiPipe 125	12,266mm <sup>2</sup>	Bathroom, toilet, utility room, kitchen and whole house
	Ø150mm	EasiPipe 150	17,263mm <sup>2</sup>	Kitchen, commercial and whole house

**i** Where components are listed with one of three connection profiles; Male, Female or Duct.

**Male:**  
The fitting will fit inside duct.

**Female:**  
The fitting will fit around duct.

**Duct:**  
The connection profile is the same as the duct and may need a Female or Male straight connector to couple to duct.

Where fittings are available in different colours:

Colour	RAL Reference and Title

# Flow Control Plenum for Architectural Grilles

KEY FEATURES

- Allows simple connection to architectural grilles – no air valves necessary
- Enables commissioning to be carried out prior to fixing the ceiling boards
- Adjusting the air terminal for commissioning is quick and easy

KEY BENEFITS

- Integral flow control device cannot be easily tampered with, thereby reducing the likelihood of impacting system performance and indoor air quality
- Commissioning rates can be agreed prior to ceilings being fixed; enabling peace of mind that the required air flow rates will be achieved (if fitted correctly) and less risk of costly remedial work
- Ability to integrate stylish grilles to fit interior design scheme

Innovatively designed to include an integral flow control device; allowing connection to a range of stylish grilles and single fix commissioning.

Why they are needed:

When installing a centralised mechanical extract system into a dwelling, the air flow rates need to be balanced and commissioned at the internal terminals to ensure the correct rates are achieved.

An integral flow control device allows the required air flow rates to be easily set and an attractive architectural grille directly fitted to the plenum – regardless of the installation stage; no air valves required.

Flow Control Plenum for Architectural Grilles

ART125-DT1W  
ART125-DT1S

To help adjust the integral flow control device for commissioning and balancing, we also offer a Flow Control Adjustment Kit – code FCAK1.

For technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

# High Efficiency Green Line Duct Bends

The colour of the internal vanes as shown in the image is illustrative (manufactured in white).

See page 50 for our range of Green Line Bends

KEY FEATURES

- Smoothly channels air through the duct bend in a uniform flow
- Performance has been tested by the Building Research Establishment (BRE)

KEY BENEFITS

- Reduces duct resistance by up to 60% to lower the system's pressure drop and overall energy usage
- Reduced air speed through the bend to lower system noise

Engineered to significantly reduce duct resistance, lower system noise and overall energy usage. Domus Green Line bends are an innovative solution for a well designed and energy efficient duct system.

Why they are needed:

Due to the profile of a duct bend, air travelling through it can become turbulent, causing increased resistance and system noise. As a consequence, the mechanical extract appliance will need to work harder in order to meet the required air flow rates; therefore consuming more energy.

Domus Green Line high efficiency 90° duct bends have been specifically designed to enable a uniform flow of air through the section of duct, reducing the duct resistance by up to 60% and lowering the air speed. All of which results in a quieter and more efficient ventilation system.

To support the most popular rectangular rigid duct profiles, Domus Green Line bends are available to install with 204x60mm (550-GL) and 220x90mm (950-GL) ducting.

For technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

PERFORMANCE

Typical air flow through a standard bend

Typical air flow through a Domus Green Line bend

Sound Attenuators -  Protected

KEY FEATURES

- Excellent sound attenuation properties as verified by the Sound Research Laboratories (SRL)
- Microban® protected foam helps enable a long life, clean and fresh ventilation system
- Low profile increases installation options and offers greater flexibility
- Lightweight and easy to fit for quicker installation time
- Can also be used with Domus Thermal duct insulation

KEY BENEFITS

- Significantly reduces transmitted appliance noise and room-to-room cross talk
- Helps facilitate occupant acceptance of a continuously running centralised ventilation system
- Helps achieve Building Regulation recommendations

Significantly reduce noise transmitted from centralised appliances and ‘cross talk’ travelling between rooms in duct systems.

Why they are needed:

Noise generated by a mechanical extract appliance could result in occupants incorrectly altering the performance of their system and as a consequence, detrimentally impacting indoor air quality.

To avoid this, Building Regulations stipulate that the system should not produce excessive noise that could discourage occupants from using it correctly.

In addition to this, resident cross talk carried through connecting room-to-room ducting can also impair homeowner comfort.

 To support the most popular rectangular rigid duct profiles our enhanced Domus attenuators are available to install with 204x60mm and 220x90mm duct systems.

For technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

Availabe in sizes:  
5SL-500 (204x60mm system)  
9SL-500 (220x90mm system)

Cumulative length acoustic sound results

The diagrams above illustrates the increased sound absorption levels when close-coupling up to three individual 0.5m lengths of rigid duct attenuators, thus reducing noise levels by up to 55dB.

Sound Absorption Chart

Size (mm)	Code	125Hz	250Hz	500Hz	1000Hz	2000Hz	4000Hz	8000Hz
204x60	5SL-500	0.2	4.2	7.4	19	19.3	21.6	22.2
220x90	9SL-500	2.9	3.5	12.3	15.5	17	18.1	18.8

 You can use multiple sound attenuators if necessary for a longer duct run

Installation

Rigid duct attenuators can be installed in roof and ceiling voids and are recommended to be fitted on the room-side of the ventilation appliance, to limit cross talk and to be near each inlet and outlet.

Approved Document F of the Building Regulations (F1 Means of Ventilation) recommends that the system should not produce excessive noise that could discourage occupants from using it correctly. A rigid duct attenuator should therefore form part of duct system, to ensure occupants do not incorrectly alter the performance of the system and as a consequence, detrimentally impact indoor air quality.

# Domus THERMAL Rigid Duct Insulation

- REDUCE CONDENSATE
- PATENT PENDING
- FASTER INSTALL
- LOWERS COST
- 20MM THICK
- PREMIUM SOLUTION

See page 60 for our full range of round duct insulation products and page 52 for rectangular.

### WHY ITS NEEDED

Current Building Regulations require that greater provision needs to be made for insulating ducting in domestic properties.

**Building Regulations demand:**  
 $\leq 0.04 \text{ W/(m.K)}$  thermal conductivity at 25mm insulation thickness.

Minimum thermal resistance or R-value =  $0.025/0.04 = 0.625 \text{ K/W}$ .

**Domus Thermal provides:**  
 $\leq 0.03 \text{ W/(m.K)}$  thermal conductivity at 20mm insulation thickness.

Thermal resistance or R-value =  $0.020/0.03 = 0.666 \text{ K/W}$ .

### TS22 (coated) TS22 (un-coated)

We offer a choice of coated or uncoated steel banding to support Domus Thermal. Suitable for surface mounting or suspending the insulated system.

As an integral part of Domus rigid duct systems, Domus Thermal is a unique and patented duct insulation system, designed specifically to radically improve the thermal insulation of rigid ducting in domestic properties.

### Why Domus Thermal?

- Complies with 2010 Building Regulations and NHBC requirements\*
- LABC registered
- Reduces heat loss and virtually eliminates the formation of condensation
- Insulates ducting passing through cold spaces and in the heated area of a dwelling
- Insulates both the exhaust and intake ducts into the ventilation unit
- An installer-friendly solution which can be fitted quickly and reliably without the need for gluing or taping

\*Note: NHBC requirement for unheated areas require supplementary insulation. Please consult NHBC Standards Chapter 3.2

For technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

### Breadth of Range

Domus Thermal is available in a range of profiles and fittings to insulate the Domus:

- Ø100mm EasiPipe ducting
- Ø125mm EasiPipe ducting
- Ø150mm EasiPipe ducting
- 204x60mm Supertube ducting
- 220x90mm Megaduct ducting

### INSTALLATION

Currently, compliant solutions are more labour intensive and require higher skill levels to install. Domus Thermal's simple interlocking feature means that the system is quicker and easier to install. This revolutionary method can therefore significantly reduce installation costs.

### Improved insulation properties

Domus Thermal is manufactured from flame retardant (EN 13163 class E) Silver EPS (expanded polystyrene), which provides its enhanced thermal insulation properties and enables the system to exceed the requirements of the current Building Regulations.

The Silver EPS used to manufacture Domus Thermal provides a significantly improved thermal conductivity value due to the inclusion of carbon particles, which gives Domus Thermal its distinctive silver colour.

Fire Sleeves

- REDUCE CONDENSATE
- FASTER INSTALL
- LOWERS COST

See page 53 for our full range of horizontal sleeves

Domus Intumescent prevent the spread of fire where Domus rigid ducting penetrates fire compartment walls. The range includes horizontal and vertical sleeves.

KEY FEATURES

Domus Fire Sleeves consist of a flexible galvanised steel shell containing graphite based intumescent material. They are manufactured to suit the following Domus duct:

Rectangular

- 110 x 54mm horizontal
- 204 x 60mm horizontal
- 220 x 90mm horizontal

Round

- Ø100mm and 125mm horizontal

Horizontal application

Why Domus Horizontal Fire Sleeves?

- Rectangular profiles tested to BSEN 1366-3: 2009
- Round profile tested to the temperature and pressure conditions of BSEN 1363-1: 1999 and the principles of BSEN 1366-3: 2009
- Tested with Uncapped/Uncapped (U/U) duct configurations as required for ventilation duct
- Up to 120 minutes fire rating (see table below for exact rating)
- Rectangular profiles are very slimline, saving ceiling space
- Suitable for masonry walls or plasterboard partitions
- Suitable for insulated and non-insulated partitions
- Can be retrofitted
- No mechanical fixings required
- Robust galvanised steel shell
- Performance unaffected by weathering (type x durability)

Performance					
Product Code	Duct Size	Space Needed Around Duct to Fit the Fire Sleeve	Recommended Aperture	Length	Fire Rating (minutes)
DFS110	110 x 54mm	5mm	180 x 73mm	140mm	120
DFS204	204 x 60mm	5mm	216 x 72mm	140mm	90
DFS220	220 x 90mm	9mm	241 x 112mm	140mm	60
DFS100	100mm	10mm	130mm	100mm	120
DFS125	Ø125mm	20mm	170mm	180mm	90

Fire Collars

- REDUCE CONDENSATE
- FASTER INSTALL
- LOWERS COST

REGULATIONS

Building Regulations require all services passing through fire compartment walls. Domus Ventilation Fire Collars therefore allow plastic duct to meet the requirements of Building Regulations.

For installation and technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

Vertical application

Why Domus Ventilation Fire Collars?

- Tested to BSEN 1366-3: 2009
- CE Marked
- Up to 4 hour fire rating
- Suitable for PVC, PVC-U, PE, HDPE, MDPE, PP & ABS pipes
- Available for Ø100mm, Ø125mm and Ø150mm ducting
- Can be retrofitted
- Robust galvanised steel shell
- Performance unaffected by weathering (type X durability)

Ø125mm

Ø150mm

Performance					
Product Code	Duct Size	Space Needed Around Duct to Fit the Fire Collar	Recommended Aperture	Length	Fire Rating (minutes)
DFSV100	Ø100mm	40mm	Ø112mm	50mm	240
DFSV125	Ø125mm	45mm	Ø132mm	50mm	240

Section 7 | Radial Systems

The property image illustrates how a typical Domus Radial system can be configured.

INSTALLATION

IS A WHOLE HOUSE SYSTEM

Suitable for new build and refurbishment projects

Perfect ventilation choice for all residential dwellings

- 
  - Apartments
  - Flats
- 
  - Homes
- 
  - Student Accomodation
  - Hotels
  - Care Homes

Whole house air distribution systems, which provide simple, quick and hassle free installation, to save time and money.

Domus Radial systems are a clever plug and play whole house ventilation solution, which use manifold distribution to evenly service each room through semi-rigid duct. These systems incorporate a centralised mechanical unit; either a Mechanical Ventilation with Heat Recovery (MVHR) or Mechanical Extract Ventilation (MEV).

Why Domus Radial?

- Up to 60% quicker and easier to install, saving contractors and developers time and money
  - Option of a slimline manifold (125mm deep) OR NEW Domus Adapt, to evenly distribute air
  - Use of Domus Adapt allows installers to run straight out into Radial duct, lowering project costs. See page 90
  - Rapid fixing mechanism enable secure and air tight connection with no leakages
  - Corrugated construction and the unique formulation of Radial duct resists stress cracking and onsite damage
  - Eliminates room-to-room cross talk, for a quieter home
  - Simplified design layout makes the system ideal for new and refurb projects
- Increased air capacity for reduced air noise, low duct losses and improved appliance efficiency
  - Ability to integrate stylish architectural grilles, through the use of an innovative Flow Control Plenum; no air valves necessary
  - Plenum with optional twin connection increases air flow and lowers energy usage
  - Can integrate Domus rigid duct to create versatile hybrid solutions that suit your project

For technical information visit: [www.domusventilation.co.uk](http://www.domusventilation.co.uk)

For more information on Domus Adapt, see page 90.

DOMUS RADIAL SYSTEMS

# VENTILATION MADE SIMPLE

Domus Radial systems are a clever plug and play whole house ventilation solution, which use manifold distribution to evenly service each room through semi-rigid duct.

These systems incorporate a centralised mechanical unit; either a Mechanical Ventilation with Heat Recovery (MVHR) or Mechanical Extract Ventilation (MEV).

# Radial Solutions **DOMUS ADAPT**

**new**

**PREMIUM SOLUTION**

**LOWERS COST**

**FASTER INSTALL**

**PATENT PENDING**

**BENEFITS**

- Lowers project costs
- Simplifies installation, to overcome site constraints and space restrictions
- Reduces installation time
- Allows for a variety of duct configurations

No typical void space is too tight or duct run too complicated for Domus Adapt, with options available to suit a variety of configurations and installations.

Domus Adapt is a unique duct solution, which will allow for simple, straightforward connection between PCDB (Product Characteristics Database) listed Domus Radial semi-rigid and rigid duct systems with minimal effort.

Designed to lower project costs, whilst also reducing duct installation time by up to 25%; Domus Adapt has innovatively evolved Radial semi-rigid duct systems, to make installing whole house ventilation, **EASIER** and **MORE COST EFFECTIVE** than ever before.

### Why Domus Adapt?

- Ideal for apartments or cluster developments, such as care homes and student accommodation\*
- Allows installers to run straight into Domus Radial semi-rigid Ø75mm duct; no need for tape, screws or sealant
- Provides a complete ducting solution, including the ducting for supply and extract when supporting a kitchen plus two wet rooms
- Will remove the need for a manifold; lowering installation costs and time
- A versatile solution to help overcome issues associated with a lack of installation space or tight void areas
- Helps prevent complicated duct runs, providing simpler design and installation
- Domus Radial is a simple plug-and-play, labour saving duct system, which takes away the need for traditional jointing

\*Capable of achieving up to 30l/s per fitting.

### Mechanical Ventilation with Heat Recovery (MVHR) Range with Domus Adapt

Domus Adapt can be seamlessly installed with the HRX Mechanical Ventilation with Heat Recovery range, allowing fitters to ADAPT straight into Domus Radial duct, thus removing the need for expensive manifolds. All units are available with a Bluebrain controller, for enhanced user control and air comfort.

**HRX-aQ**  
Ideal for ceiling/void applications in a floor area up to 80m².  
For more information on unit, see page 8.

**HRX2D**  
For installation in a floor area up to 250m².  
For more information on unit, see page 14.

### Mechanical Extract Ventilation (MEV) with Domus Adapt

As a versatile solution, the CMX Mechanical Extract (MEV) appliance is available with Domus Adapt, for a straight in and out Radial duct run.

**Code:** CMXR-S  
**Socket Size:** 220x90mm  
**Radial Duct Socket Size:** Ø75mm  
**Includes:** CMX-S MEV unit, 1 blanking cap, 3 seals and 3 clips

### Fittings

The Domus Adapt range includes T pieces, In-line Adapters, Elbows and Bends, available to install with a MVHR or MEV appliance. All pressure loss figures have been tested by the Building Research Establishment (BRE).

<b>Adapt T Pieces</b>  RDA-3T, 220x90mm RDA-6T, 220x90mm RDA-6TB, 220x90mm	<b>Adapt In-Line Adapters</b>  RDA-3FA, 204x60mm RDA-3FC, 220x90mm	<b>Adapt Elbows</b>  RDA-3R90-125, Ø125mm RDA-3R90-150, Ø150mm

## Section 8 Domus Ventilation Support

### Let us help you become a BPEC Accredited Ventilation Installer

Our ventilation installer training course provides installers with the opportunity to learn new skills and increase their scope of work.

To book call **03443 715523** or email: [vent.sales@domusventilation.co.uk](mailto:vent.sales@domusventilation.co.uk)

### Rotating Vane Meter

The CM01 is a hand-held digital rotating vane anemometer used for air velocity and volumetric flow measurements.

Simple to use, the CM01 enables the commissioning and performance inspection of all types of ventilation systems, by providing accurate and reliable readings every time.

- Measures velocity and temperature
  - Calculates volumetric flow rate
  - Supplied with large format flow hood and carry case
  - UKAS approved calibration certificate
  - Light weight, robust and simple to use
- Requires 4 x AA batteries (included)

To order a CM01 call **03443 715523**

### Why you should be qualified:

Domestic ventilation became 'Notifiable Work' on 1st October 2010 as part of the 2010 revision to Approved Document F of the Building Regulations. This means ventilation provision in new homes must be commissioned by a suitably qualified person.

To ensure installers are qualified to complete domestic ventilation installation, commissioning and hand-over, Domus Ventilation wrote and launched the first industry-recognised accredited training program. The content of the course conforms to the requirements of Summit Skills new syllabus for ventilation and is recognised by the Government as a suitable academic qualification for relevant Competent Person Schemes.

The course is accredited by independent training company BPEC, an industry recognised training and certification provider which already provides ACS, OFTEC, ECS and other renewable certification.

The new domestic ventilation course provides significant opportunity for allied trades to take on additional skills and increase their scope of work.

### Training course objectives:

The objectives of this training course are to enable delegates to:

- Install and inspect common types of domestic ventilation systems in the UK
- Commission any of the common types of domestic ventilation systems in the UK safely and efficiently

### Who the course is applicable to:

- M&E Contractors
- Plumbing & Heating Contractors/Engineers
- Electricians ■ Specialist Wholesaler & Merchant Staff
- Students & Apprentices ■ Building Control

### Domus MVHR range See pages 6-17

### What is covered:

The syllabus covers the majority of existing types of UK domestic ventilation systems and emphasises the most common configurations that most tradespeople are likely to encounter.

Due to time constraints, the syllabus does not aim to cover material that should already be known to plumbing, heating and electrical engineers. Repetition of existing knowledge is only likely to occur in areas which are regarded as critical, including legal and safety issues.

### What prerequisite knowledge is needed:

The training/assessment course is targeted at candidates with a number of years' experience in plumbing, heating or electrical engineering and who hold or are studying towards an NVQ Level 3 in plumbing, heating or electrical engineering.

### Course duration, content and assessment:

The training and assessment course runs over two days and includes both theoretical training and practical exercises.

At the end of the course there is a multiple choice assessment that each individual candidate needs to pass. The assessment is closed book.

#### Day 1

- Background and Building Regulations
- Course aims and objectives
- Module 1: Domestic ventilation in context
- Module 2: Air flow requirements and calculations
- Module 3: Health and Safety

#### Day 2

- Module 4: Installation, inspection, testing, commissioning and provision of information
- Commissioning workshop and assessment
- Examination

### Professional development centres

The ventilation installer training course is available at a choice of two locations:

- Aylesford, Kent
- Doncaster, South Yorkshire

Newest training facility at Caerphilly Head Office; awaiting BPEC approval.

### Course availability:

Courses are run on two consecutive days at both training centres regularly throughout the year.

### Course includes:

- BPEC official certification
- BPEC manual
- All necessary training materials
- Lunch and refreshments both days
- Qualification and van stickers upon successful completion

### Payment:

To book, please call our Customer Service team on **03443 715523**

Glossary

**ACH** – Air changes per hour. The number of times the volume of air in a room needs to be changed in one hour depending on the activity in that space. Normally given as a range e.g. 15-20 ach; based on the level of usage.

**Air Changes – CIBSE Guide B, 2005** recommends extract rates are calculated by multiplying the volume of the room (m³) by the below air changes per hour (ACH). This rate should always be greater than Building Regulations minimum requirements.

Bathrooms 6 - 8	Launderettes 10 -15

**Axial Fans** are suitable for low pressure applications, where duct runs are short.

**Branch** – A section of a duct system serving only one or two inlets or outlets.

**Centrifugal Fans**, also known as radial fans, deliver the pressure needed to propel air through long duct runs.

**cMEV** – Centralised Mechanical Extract Ventilation. See page 24.

**CSH** – The Code for Sustainable Homes is the national standard for the sustainable design and construction of new homes. The Code aims to reduce our carbon emissions and create homes that are more sustainable. It applies in England, Wales and Northern Ireland.

**dB(A)@3m** – Decibel, unit of sound measurement based on pressure at 3m away from the source. P17 of the Approved Document F of Building Regulations recommends sound levels for whole house ventilation systems do not exceed 30 dB(A) levels within bedrooms and living rooms.

**dMEV** – Decentralised Mechanical Extract Ventilation. See page 24.

**Duct System Resistance** – The total resistance of the duct system can be calculated by simply adding up the resistance of each component at a specific air flow rate. Each product within the Domus range has a measured resistance value for the main UK Building Regulation extract flow rates.

**Dwelling Emission Rate (DER)** – The estimated annual CO² emissions per square meter due to space heating, water heating, ventilation and internal lighting, minus any CO² emissions saved by the generation of electricity.

Electrical Safety Zones

Section 701 of British Standard 7671:2008 defines four bathrooms and shower room zones:

Zone	Description Voltage	Permitted	Min IP
Zone 0:	The interior of a bath or shower basin	None	None
Zone 1:	Area above Zone 0 up to a height of 2.25m above the floor	Separated extra low voltage (SELV) with transformer located outside Zone 2	None
Zone 2:	Area above Zone 1 up to a height of 2.25m, as well as the area that is horizontally within 0.6m from Zone 1	Any	X4 protection against splashing water from all directions
Outside the Zones:	Includes any space under the bath or shower that can only be accessed with a tool	Any	Any
Fans with humidity controls and PIRs should not be located within splash Zone 1			

**EPP** – Expanded Polypropylene.

**EPS** – Expanded Polystyrene (Silver).

**EST** – The Energy Saving Trust (EST) provides independent sustainability recommendations to businesses and individuals. They are accepted by the Government as the authority on many environmental issues.

**Extract Rates** are given in Table 5.1a and 5.1b of Approved Document F of Building Regulations 2010.

**Habitable Rooms** – A term used by the Building Regulations to collectively indicate that fresh air is being supplied to bedrooms, living rooms, dining rooms or similar.

**Humidistat** – A switched control that triggers the appliance once a set level of humidity is reached.

**IEE Wiring Regulations** – Publication of the Institute of Electrical Engineers. Also known as BS 7671.

**Intermittent Extract Fans** – Local extract fans are fitted in a dwelling’s ‘wet rooms’ and provide rapid extraction of moisture and other pollutants. They operate intermittently under either occupant or automatic control. See page 26.

**IP Rating** – Classification of degrees of protection for an electrical product developed by CENELEC. First digit describes degree of protection from solids, the second from liquids. Example: IP44.

**l/s** – Litres per second - measurement of volume flow.  
l/s = m³/h ÷ 3.6

**m³/h** – Cubic metres per hour - measurement of volume flow.  
m³/h = l/s x 3.6

**MEV** – A Continuous Mechanical Extract Ventilation continually extracts air from ‘wet rooms’. It usually consists of a central ventilation unit (cMEV), positioned in a cupboard or loft space ducted throughout the dwelling to extract air from the wet rooms. Other configurations do exist, including the use of continuously running individual rooms (dMEV).

**Mixed Flow Fans** combine elements of axial and centrifugal and are therefore appropriate for medium length duct runs.

**MVHR** – Continuous, balanced Mechanical Ventilation with Heat Recovery systems extract stale air from wet rooms and deliver fresh air to habitable rooms. Heat loss associated with the air changes is reduced by a heat recovery mechanism. See page 6.

**Pa** – Pascal, unit of pressure for measuring system resistance or static pressure.

**PIR** – Passive infrared sensor, detects movement and is used to trigger appliances.

**RH** – Relative humidity. The ratio of the amount of water in the air at a given temperature.

■ Outside humidity levels are usually between 60-70%RH

■ The target for indoor levels is normally between 40-60%RH

**SAP** – The Standard Assessment Procedure (SAP) is the Department of Energy and Climate Change’s (DECC) methodology for assessing and comparing the energy and environmental performance of dwellings. Its purpose is to provide accurate and reliable assessments of dwelling energy performances that are needed to underpin energy and environmental policy initiatives.

**SELV** – Separated Extra Low Voltage, used to describe fans operating at less than 25V.

**Specific Fan Power (SFP)** – The measurement of power used to drive a fan. Measured in Watts per litre per second (W/l/s).

**SRHRV** – Single Room Heat Recovery. See page 6.

**Target Emission Rate (TER)** – To comply with Part L1A, the dwelling CO² emission rate (DER) must be no greater than a target emission rate based on a notional dwelling of the same size and shape.

**Temperature** – The common metric measurement of which is Centigrade (or Celsius).

**Thermal Overload Protection** – A safety component designed to interrupt the current to a motor before the windings exceed their design operating temperature.

**Trunk** – The section of a duct system carrying the maximum flow of air to or from the appliance.

**Watts** – Measure of electrical power.

**Wet Rooms** – Refers to rooms with potable water; for example, kitchens, utility rooms (including utility cupboards and drying rooms), WC’s or bath/shower rooms from which stale, polluted air is extracted. Hallways and landings are used as conduits for the exchange or transfer of air.

Terms and Conditions

General Training Information

For our distribution customer base.

Site Deliveries

We will require logistical information before attempting to deliver to all project sites. Your urgent attention to these requests will ensure that we can deliver to the agreed date.

Carriers

We have dedicated delivery days throughout the UK.

We can also offer a 48-hour carrier facility to cater for your urgent order requests, however a scaled charge will apply for this facility. Details are available upon request, by calling 03443 715523

Claims for Damages and Shortages

Please submit any claims within 3 working days to [vent.sales@domusventilation.co.uk](mailto:vent.sales@domusventilation.co.uk)

To request a proof of delivery please call 03443 715523.

Return of Product

We do not accept any return of product surplus to requirements, unless previously agreed in writing.
